- Training scenario
- Evening break
- Bed time

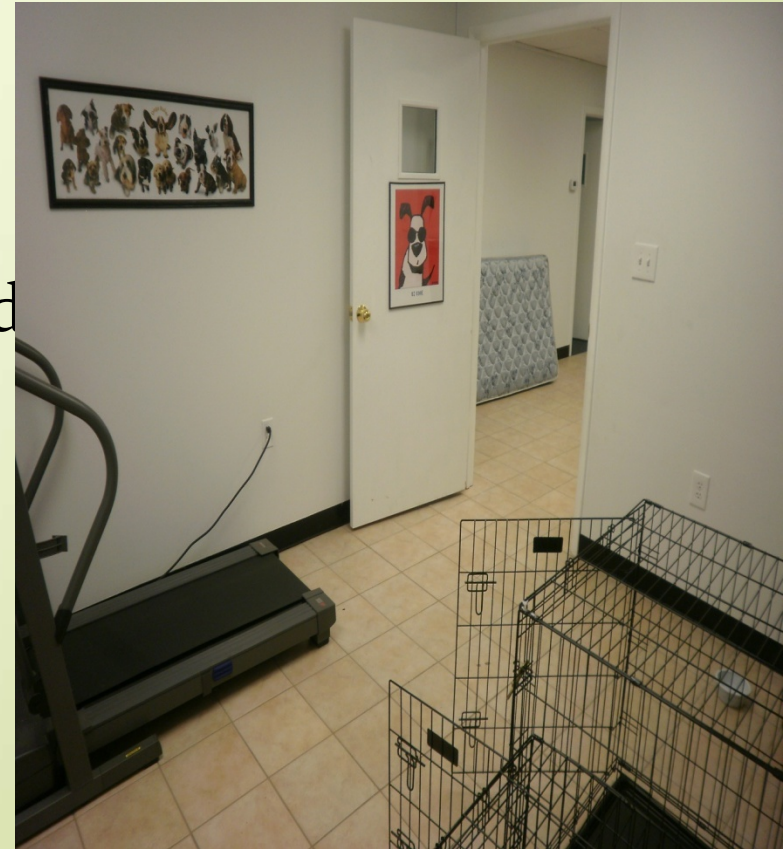

Diet

- Deer Park Water
- Professional or limited filler food
- Exercise
- Based on Pavlov theory

J. M. Johnston, Ph.D. Auburn University June 1999

CANINE DETECTION CAPABILITIES:

Olfactory Sensitivity

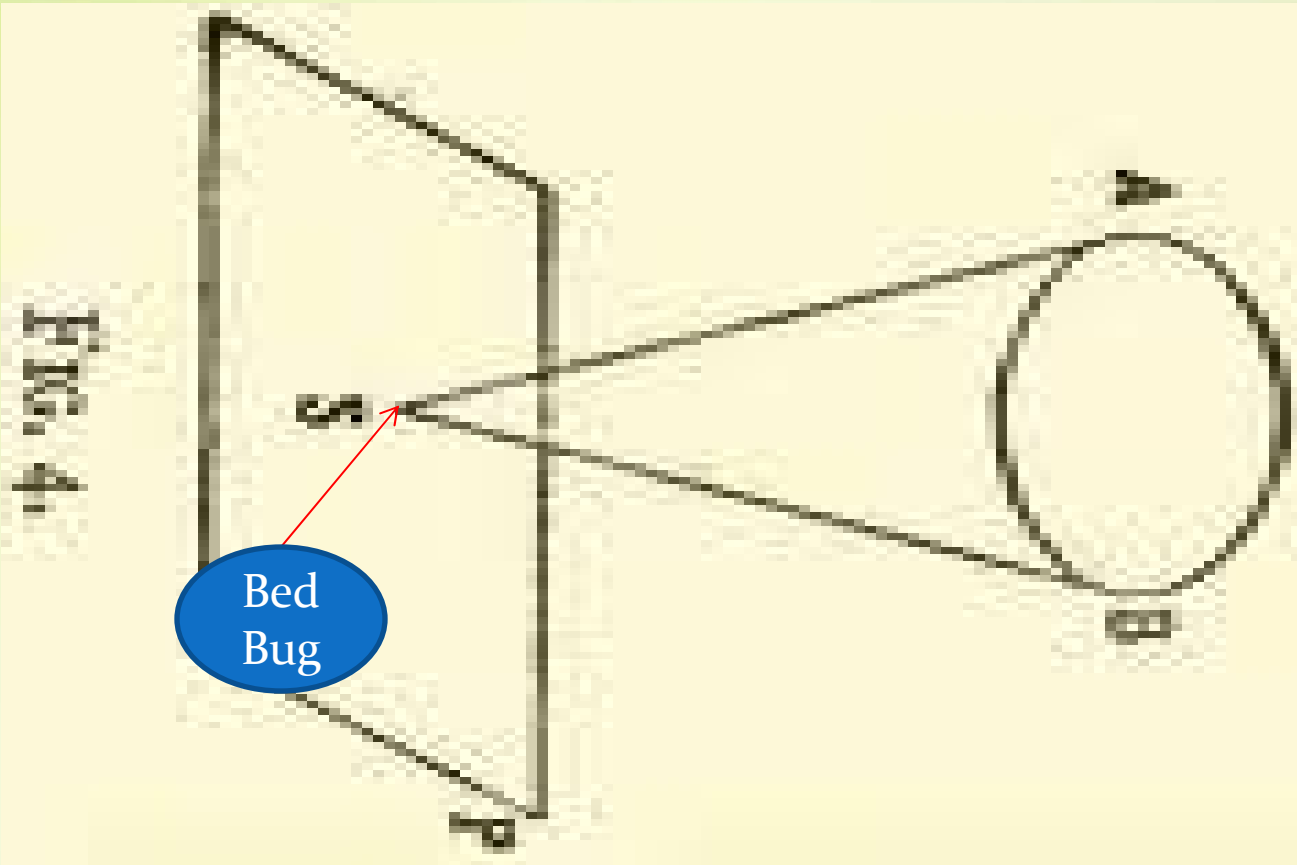

Documented limits of olfactory detection for the dog range from **tens of ppb to 500 ppt**.

Trainers/handlers should understand that dogs detect substances in term of vapor concentration, not weight.

Regardless of the concentration at the odor source, dogs initially encounter relatively low concentrations on the periphery of a vapor plume.

Demo

K-9 Pest Detectors

The most accurate and unbiased way to detect bed bugs is with the use of well-trained, certified canine teams. K-9 Pest Detectors has a combination of four NESDCA certified teams at your service.

K-9 Pest Detectors has the only NESDCA certified K-9 teams in our area, trained with Pepe at J&K Canine Academy, Inc.

K-9 Pest Detectors

Pro's

- Quicker Inspection
- More Accurate
- Cost Savings
- Unbiased inspection & Confirmation of control

Con's

- Not always 100%
- Not all canine teams are trained the same
- 30 day wait period after conventional treatment
- Full time handler
